

Test GSTINs & why GST/Seller verification is mocked

Read this before entering a GSTIN in the demo

The GST portal is captcha-protected and hence no public API was available for the prototype, and the Meesho Seller API needs a registered seller account - neither has a sandbox we can call live. So in Karigar these are mocked behind a swap-ready interface:

The day real credentials exist, it's a config change, not a rewrite. The mock is built to behave exactly like the real service would, which means a GSTIN either resolves to a registered business or it doesn't. Random GSTINs will not verify - that is correct behaviour, not a bug.

The mock's "registry" is seeded with the 4 GSTINs below (just as the real portal only knows businesses that are actually registered). Use one of these to test the instant GSTIN fast-path.

Valid test GSTINs

GSTIN	Legal name	Trade name	Business type	Registered address
22AAAAA0000 A1Z5	AISHITA KUMAR	Aishita Handicrafts	Proprietorship	Rohini, Delhi-110085
10BBBBB1111 B1Z3	RAMKALI DEVI	Ramkali Madhubani Kala	Proprietorship	Madhubani, Bihar-847211
27CCCCC222 2C1Z8	SURESH KUMAR	Suresh Warli Arts	Proprietorship	Palghar, Maharashtra-4 01602
24EEEEEE4444 E1Z9	GITA BEN PATEL	Gita Bandhani House	Proprietorship	Bhuj, Kutch, Gujarat-37001

After the GSTIN verifies, the flow asks for a bank passbook whose name matches the legal name shown (e.g. a passbook for "AISHITA KUMAR"). This mirrors the real Identity-Anchor rule: the GST business and the bank account must belong to the same person.

Prefer the path that needs no GSTIN

When asked "क्या आपके पास GSTIN है?", choose "नहीं" and use the Enrolment-ID route instead: send a PAN photo, then a bank passbook photo (any of the dummy documents in the test-images folder, or any other documents, the OCR is live and real), and then an OTP. This is the main onboarding flow and works entirely on the sample documents provided.

How this maps to production:

- GSTIN lookup → Today: Seeded registry. Real: GST portal / GSP API. Same contract ('lookup_gstin' returns legal name, trade name, address, or nothing).
- Enrolment + OTP → Today: 15-char ID issued after any 6-digit OTP. Real: GST enrolment portal (roadmap: Playwright form-filler that pauses at the real OTP step). Same contract.
- Seller account / listing → Today: mock Meesho Seller API. Real: Meesho Seller API once a registered account is provisioned. Karigar's code only ever calls `app/services/meesho.py`, so the swap is isolated.
